UDACITY NANODEGREE PROJECTS

Full-Stack web Developer

July 2022– Present

- Implemented a database to an artist app. Optimised for searching artists, booking venues and details about upcoming shows
- Made a trivia application api. Optimised for random quizzes and also questions based on provided categories; and the ability to add trivia questions. coupled with the documentation on how to implement said api.
- Deployed applications using AWS. using continuous integration and continuous delivery

PERSONAL PROJECTS

- Built a todo single page application completely with reactJs and router. Utilizing local storage as the primary storage; capable of full CRUD functionality. Also utilized the doughnut charts to track and display completed, pending and discarded to-dos
- Cloned twitter to work on styling, implementing the full CRUD functionality. I used redux, reactjs and router to build the Single page application clone
- Build my portfolio website completely using reactJs
- Built an E-commerce website using reactjs, routing and redux, consuming APIs and also database and authentication functionalities
